Got Soccer Memo # 21 Releases and transfers

The Got Soccer system transfers and releases players differently than our previous system. If a player has not been placed on an Official State Roster in the registrar tab, then to change teams, a selection in the drop down box of eligible teams in the player's account is sufficient Once a player has been placed on an Official State Roster, then the transaction must occur in the registrar section. Select the player, then select the transfer button and select the applicable team (in the same club). The roster for the new team must be updated as well.

Do Not use the "delete"or "Remove" Button

For releases from an affiliate so that a player may move to a new club, the process is a bit different. If the player has not been rostered:

- the player's competition level should be set as inactive,
- set the team as none.

The player may now be imported to any other club.

If the player has been placed on an Official State Roster, then while in the Registrar tab, in the current registration event:

- select the team:
- select the player
- Press the release button
- Then the player must be released in the Club section by setting the team to none
- set the competition level to inactive.

Do Not use the "delete"or "Remove" Button

In all cases it is important to collect and destroy any passes that may have been issued, and under no circumstances should you ever press the delete or remove player button.

Never use the "delete"or "Remove" Button
